

# System.Action<T> Delegate

```
[ILAsm]
.class public sealed serializable Action`1<T> extends System.Delegate
{.method public hidebysig newslot virtual instance void Invoke(!0 obj) }

[C#]
public delegate void Action<T>(T obj);
```

## Assembly Info:

- Name: mscorlib
- Public Key: [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00 00]
- Version: 2.0.x.x
- Attributes:
  - CLSCompliantAttribute(true)

## Implements:

- System.ICloneable

## Summary

Represents the method that performs an action on the specified object.

## Parameters

Parameter	Description
<i>obj</i>	The object on which to perform an action.

## Inherits From: System.Delegate

**Library:** BCL

## Description

[Note: This delegate is used by the method `System.Array.ForEach(T[], Action<T>)`, and in `System.Collections.Generic.List<T>` to perform an action on each element of the collection.
